

NiloPlast 20SmoothNiloPlast 20Mineral

THE PRODUCT

NiloPlast 20 plastomeric are waterproofing membranes manufactured advanced an continuous calendaring process by saturating and coating a synthetic carrier with a waterproofing compound made of a special grade of bitumen, which is modified with APP polymers. While the APP polymers enhance the thermal, mechanical, and aging properties of the membranes compound, the mechanical characteristics of NiloPlast 20 are established by the non-woven filament continuous spun-bond Polyester or Glassfiber mat which acts as the reinforcement that provides the membrane with its particular tensile strength, tear resistance, puncture resistance and elongation properties.

The upper surface of **NiloPlast 20** is covered with an anti-adhesive finish material while the lower surface is laminated with a thermo-fusible polyethylene film.

USES

NiloPlast 20 multi-purpose are roofing membranes for & waterproofing applications subjected to different mechanical stresses and Extreme weathering conditions, in multi layer systems and can be used а single layer in specific as application.

NiloPlast 20 membranes are particularly recommended for the following applications.

- Roofing or re-roofing works for sloped and flat protected roofs.
- Waterproofing of underground structures
- Waterproofing of wet areas, mechanical rooms and terraces.

NiloPlast 20 MINERAL is used for exposed applications or as a cap-sheet in a multi-layer system.

APP Modified Bitumen Waterproofing Membranes

With Non-Woven Spun-Bond Polyester Or Glassfiber Reinforcement

MAJOR FEATURES

- Good UV Resistance
- Enhanced Resistance To Chemicals
- Excellent Mechanical Properties
- Enhanced Performance, under a wide range of temperature fluctuation, (from 20 °C to 150 °C)

SURFACE FINISH

The lower surface of **NiloPlast 20** is laminated with a Polyethylene film while the upper surface is covered with one of the following surface finish materials:

Fine Sand

- NiloPlast 20 S/E NiloPlast 20 - E/E
- Polyethylene Film
 Mineral Slate chips or Special Granules
 NiloPlast 20 HINERAL

APPLICATION

NiloPlast 20 is usually applied by using a propane torch or a hot air generator as well as by mechanical fastening. It can also be applied using special adhesives in cold or hot applications. The substrate surface must be clean, dry, smooth, and free from any irregularities. According to the surface conditions, a coat of BituNil primer maybe required prior to the application of the membrane. **NiloPlast 20** can be applied to the substrate fully bonded, semi bonded or loose laid, and the method of adhesion to the substrate shall be decided according to the waterproofing system design. Side laps should be from 8-10 cm, while end laps should be from 12-15 cm. For more info on application refer to BituNil application guide.

STORAGE & HANDLING

NiloPlast 20 rolls should be kept in an upright position in a flat, properly ventilated and sheltered storage area.

STANDARD SUPPLY DATA & PALLETISING

			Standard	Rolls/ Pallet					
Group 100	Group 105	Thickness *	Roll Size	Group 100	Group 105

400	405	4mm	1M x 10M	23	23				
*Thickness tolerance as per UEAtc. Directives for Group 100 and UEAtc. ± 5% for Group 105.									
Group 1000	Group 1005	Weight **	Standard Roll Size	Group 1000	Group 1005				
4000	4005	4.0 Kg/ sqm	1M x 10M	30	30				
4500	4505	4.5 Kg/ sqm	1M x 10M	25	25				
5000	5005	5.0 Kg/sqm	1M x 10M	23	25				
**Weight tolerance as per UEAtc. Directives for Group 1000 and UEAtc. ± 5% for Group 1005.									

Loading Capacity: 20 pallets / Container

The above quantities are indicative only and may be subject to changes in order to comply with transport limitations according to the final destination of the product.

BituNil membranes are made of non-polluting substances, therefore are safe products during production, application and use.

The declared average values represent the best performance achieved at the present state of our knowledge, BITUNIL S.A.E reserves the possibility to change, without warning, the technical characteristics in order to make the product more responding to the application requirements. The choice of the type of membrane for the kind of use is at the purchaser's discretion.

Tolerances for the above values if not mentioned are according to the UEAtc directives.

(1) Exact value depends on thickness of the product.

(2) Deviating from the standard method, The assessment is made in 1 Hour test 4mm or 4.5Kg/m2 products.
